Topic outline

Understanding management

Have you ever wondered what 'management' really means? What kinds of ideas and activities make up 'management'? What or who makes a good manager – or a bad one? And how can you get involved and manage better? This course aims to help you make sense of management and answer some of these questions for yourself.

Understanding Management is about the role and behaviours of peoplewho manage part or all of a working organisation. That does not mean we assume that you are a manager, but if you are, the course represents a positive fi rst step in your own professional development. It is also about how all of us can learn to manage better the various challenges we face in our working lives. These may be the tasks or roles we are asked to perform in our place of work, or they may be to do with balancing the work and non-work aspects of our lives. Finally, the course asks you to clarify what you would like to accomplish in your future working life and to refl ect on the possible ways you could better manage it.

Dear student,

You are taking part in a pilot project which enables students in prisons to access learning materials and communicate with their tutor via the virtual campus.

You will receive a physical copy of all your course materials and you will also receive hard copy written communication from your tutor but in addition to this there will be several things you can do at a computer if you choose to.

Your course home page on the virtual campus holds electronic copies of all of the course materials so you can

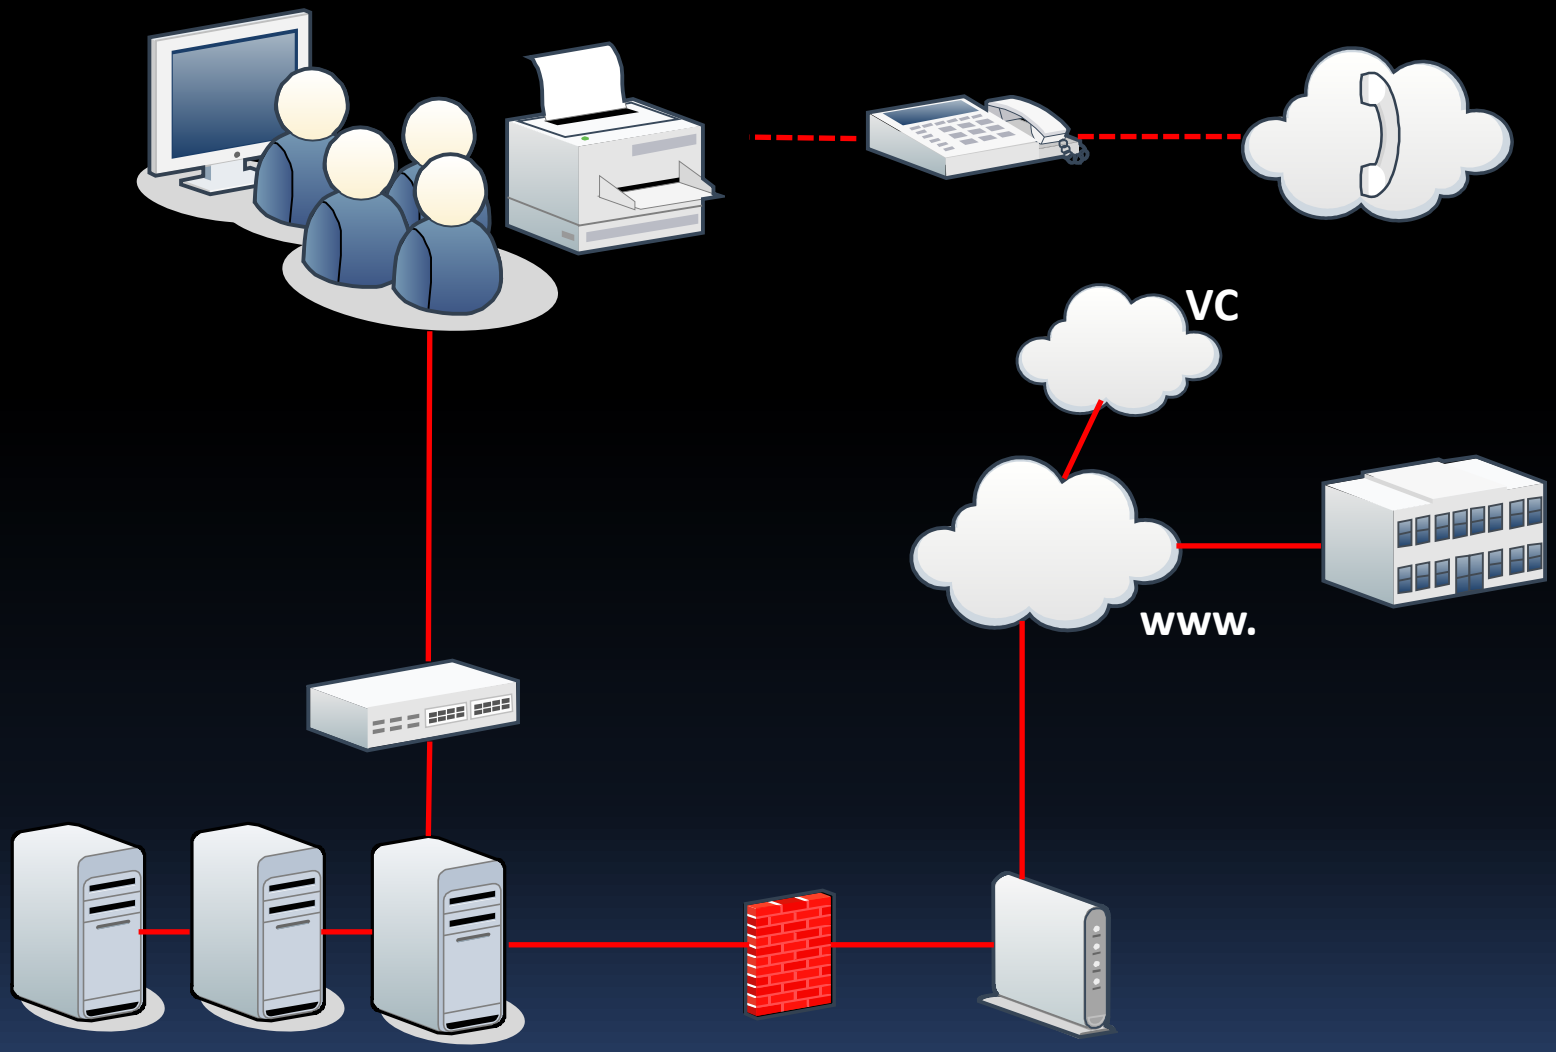
Sites



VC
www.

Distance of cable run required from PABX to presentation of server / router

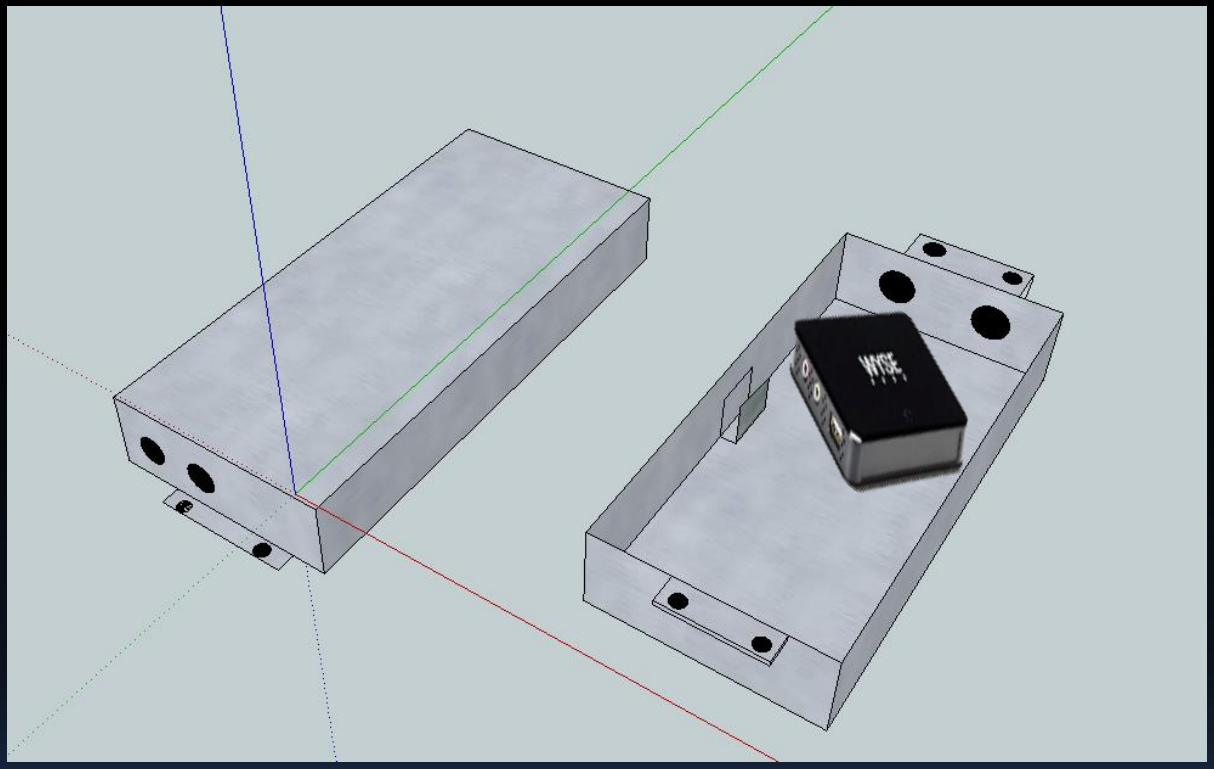
The availability of ducting space

The availability of existing network infrastructure

Accessibility and location, broadband speeds

(vulnerable, mainstream, sex offenders etc.)

Security



Security

Achieving security acceptance is a multi-stage process and can represent a challenge in its own right

Need to recognise which hurdles have been ‘cleared’ and which remain ahead

Continual IT evolution and the unpredictability of new threats means that certain hurdles could reappear at any time

The ultimate hurdle… the race is never won

Partnerships have been critical to the success of Virtual Campus throughout

The programme of delivery was paid for mainly from providers and service users. Cabling costs were met by each prison.

Cost efficiencies are found by constantly developing the solution with key partners and carrying out site surveys that identify spare infrastructure

Individual sites range from 15 terminals to over 300 terminals

What else are we doing?

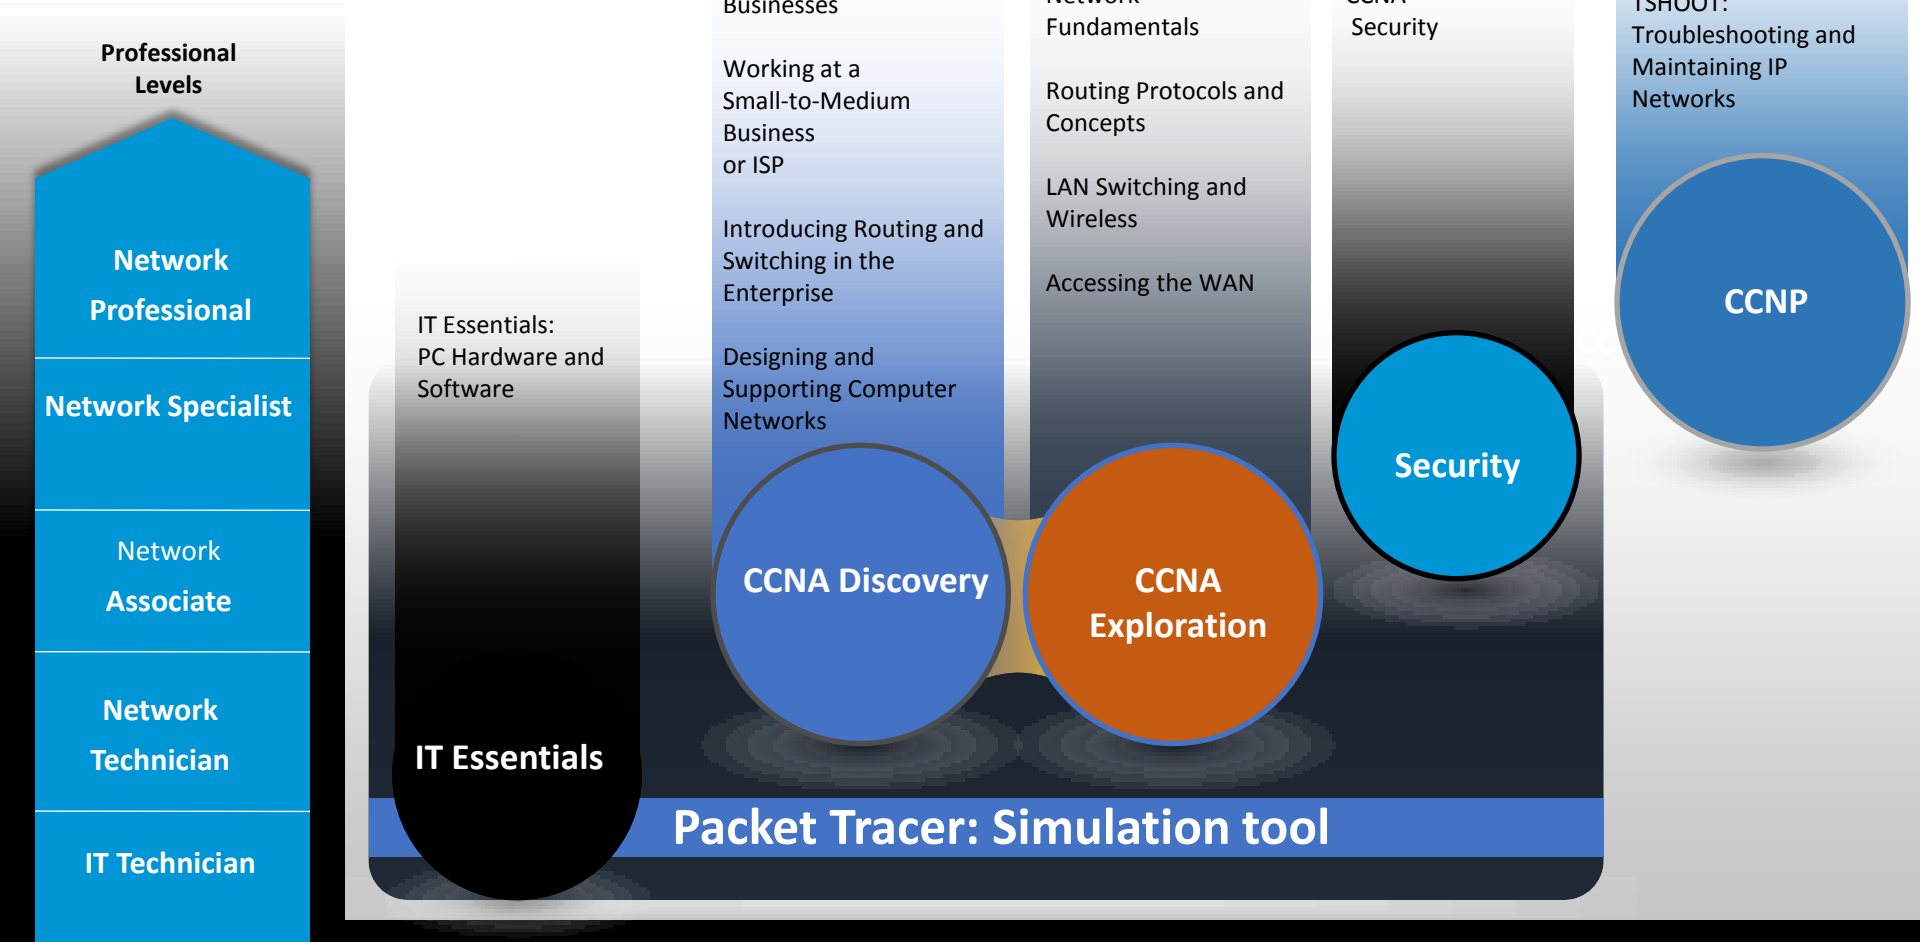
Prison ICT Academy

Cisco networking academies – IT Essentials through to CCNP

Utilised offenders to install network cabling for VC in some instances

Introduced the Microsoft Academy Programme into prisons

Relevant Curricula Portfolio



Improve Student Networking Knowledge and Skills

Major Game Changers in Progress

Virtual Classroom – Remote delivery of education

Allows delivery of education from a single site to all, some or a single terminal

Securely

In Cell 2 Pilot (V2C)

Feasibility of using technologies that are both secure and cost efficient

Thank You
