Lithuania	The Lithuanian prison service is waiting for the recommendations from the Ministry of Health. Anyway, inmates will be vaccinated on the same terms as the general population depending on which priority group they fall under (ageing, vulnerable, etc.)
Netherlands	The information provided thus far indicates that detainees will be vaccinated on the same terms as the rest of the population. This means that the vaccination will be free and optional. Furthermore, there will be a prioritized group, that will receive the vaccination first.
Northern Ireland	Prisoners in Northern Ireland will have the same rights to access the vaccine as everyone in the general population. The vaccine will be supplied free to prisoners in Northern Ireland and in phase 1, which starts on 14/12/2020 our prisoners who are aged 80+ will be offered the vaccine. Other groups will then be offered in further phases in line with delivery within the wider population.
	As with the general population, prisoners will be offered the vaccine, but it will not be mandatory – they may refuse. We have seen this with testing for the virus where around 95% of new committals have been tested, with 5% refusing the test.
Norway	With reference to the question from Hungary: In Norway, inmates will be vaccinated on the same terms as the rest of the population. That means that if there are vulnerable groups among the inmates, these will also be prioritized as in the rest of the society.
Romania	In Romania, inmates' Covid-19 vaccination strategy will be the same as for the general population. The information provided so far indicates that the vaccine will be free and optional.
Sweden	From the Swedish Prison and Probation Service, SPPS, the response is the same as from HMPPS and the LPD, The prisoners will receive the vaccine according to the same regulations as the general population.
