Spain	573	217			<p>Officers: 217 Active Cases/118 Under observation.</p> <p>Inmates: 573/2000.</p>
Spain - Catalonia	25	81			<p>Staff: 81 active cases (424 recovered, total 505)</p> <p>Inmates: 25 active cases (559 recovered, total 584)</p>

Sweden	34				As of February second, the numbers of infected prisoners within the Swedish Prison and Probation Service are as follow; Total number of infected prisoners; 503 Total number of recovered prisoners (from Covid-19 infection); 469 Currently infected prisoners; 34
1) What priorities are given to the vaccination of prisoners and staff members within the prison administration/service? 2) According to what criteria (physical condition) are detainees considered as “vulnerable”? 3) In terms of vaccination, what priority is given by your government to the prison population compared to other vulnerable populations?					
England and Wales	Whilst a more robust model for vaccination of staff and prisoners is under consideration here at HMPPS, currently both groups are being vaccinated in line with the priorities set in the community. This can be found on the GOV.UK website: https://www.gov.uk/government/publications/covid-19-vaccination-care-home-and-healthcare-settings-posters/covid-19-vaccination-first-phase-priority-groups				
Czech Republic	According to the National C19 vaccination strategy, prison staff members fall into the second priority group (the first group being people over the age of 80 and social-care homes’ clients). The second priority group also consists of medical staff, the police, fire brigades, and other members of the so-called critical infrastructure. Within the prison service, there are further priority subgroups - such as staff working at C19 units in prison hospitals, general medical staff in prison hospitals and in prisons, front-line prison guards and prisoner treatment specialists (educators, psychologists...), etc. Prisoners as a whole are not set as a separate priority group. Respecting the “equivalence of care”, they shall be vaccinated on the same terms as the general population, i. e. priority shall be given according to their individual vulnerability status related to their age and health condition.				
Denmark	1) Prison guards, healthcare staff and staff in critical functions will be prioritized. 2) Age Certain chronic diseases and persons with weakened immune systems Overweight - persons with a BMI over 35 or with a BMI over 30 and one or more chronic diseases. Pregnant women 3) Inmates will be vaccinated with the remaining population if they are not considered vulnerable. The Danish Health Authority has determined that vaccinations is given in the following order: 1. Residents in nursing homes, etc. 2. People aged ≥ 65 years who receive both personal care and practical assistance. 3. People aged ≥ 85 years. 4. Personnel in healthcare, elderly care and selected parts of the social sector who are at particular risk of infection or who has been identified as performing a critical function in society. 5. Selected persons with conditions and diseases that result in a significantly increased risk of severe illness from COVID-19. 6. Selected relatives of persons at significantly increased risk of severe illness from COVID-19 or relatives who are indispensable as carers. 7. People aged 80-84. 8. People aged 75-79. 9. People aged 65-74. 10. People under 65 years of age who have conditions and diseases that put them at risk of severe illness from COVID-19. 11. Staff in other sectors critical to the functioning of society. 12. The remaining population, for example prioritized according to age. Prison guards, healthcare staff and staff in critical functions are in category 11. Other categories of staff and inmates in category 12.				
Spain	regarding the vaccination of inmates and workers in our prisons: • The Sub directorate General of Penitentiary Health holds weekly meetings on COVID measures and vaccination with the Ministry of Health and all health services of the Autonomous Communities. • Vaccination of our inmates and prison workers is included in the National COVID-19 Vaccination Plan like all Spaniards. We have agreed that each Autonomous Community includes prisons located in its territory (inmates and prison professionals) as well as includes the general population. According to the prioritizations in Spain: • In the 1st phase, all health professionals in all prisons are already being vaccinated just as health professionals in hospitals or health centres are being. • Currently, our prison health staff is already being vaccinated and we hope to finish in a few weeks. • We are vaccinating with our prison nurses or public health nurses. • At this stage, the elderly homes and their staff are also vaccinated. • In the 2nd phase, prison workers will be vaccinated for being essential staff (as well as firefighters, police, etc.). Also inmates given their vulnerability and because prisons are closed institutions.				
France	The government strategy is in the process of being deployed. As it stands, the guidelines of the Ministry of Solidarity and Health with regard to detainees are to align the priority public for the 1st vaccination campaign with the principle applied to the general population. In concrete terms, since January 18, 2021, vaccinations have been gradually implemented for prisoners over 75 years old and / or at risk of comorbidity. A national doctrine regarding public detainees is being finalized by the Ministry of Solidarity and Health to be sent to regional health agencies and health units. This involves specifying the challenges of logistics (including delivery of doses), assessment of needs by site, coordination with the prison authorities for concrete implementation.				
Lithuania	1) Prison healthcare staff have already received vaccination. Prisoners will be vaccinated in line with the priorities set forth by the National health authorities. 2) According to what criteria (physical condition) are detainees considered as “vulnerable”? All prisoners are considered vulnerable as they are exposed to health risks. 3) Prisoners shall be vaccinated on the same terms as the general vulnerable population depending on which priority group they fall under.				

Belgium	<p>In response to your question, I can tell you that this issue is also a concern to us.</p> <p>A task force has also been set up at federal level in which the federated entities are also represented, given Belgium's institutional structure and their role in the vaccination of the population.</p> <p>Our wish is that the prisons will soon be included in the vaccination plan, especially in the wave of vaccination of the communities. We do not yet have a decision on this matter.</p> <p>At the level of the administration, we have developed priorities between institutions according to the vulnerability of the prison population: institutions with older and interned populations, institutions with medical centres, annexes). A vaccination plan for inmates and staff is being drawn up for a first institution, which will also serve as a test for subsequent institutions.</p> <p>We do not yet have a date, depending on the delivery of the vaccines, which is not clear at the moment and we are awaiting a decision from the task force.</p>
Luxembourg	<p>1) The National Administration of Penitentiaries has applied the measures issued at national level through the Vaccination Strategy against COVID-19 in Romania, so the 3 national vaccination stages among prison officers have been respected.</p> <p>Stage I: Health and social workers - public and private system:</p> <p>a) Hospital and ambulatory staff (i.e. medical-health, auxiliary, administrative, security, surveillance and other categories of staff); b) Emergency medical staff; c) Primary health care staff – family, school and community healthcare network;</p> <p>d) Staff working in laboratories, pharmacies and other health workers; e) Dental staff; f) Resident doctors and medical students profile; g) Paramedics and other volunteers working in health facilities; h) Health care staff working in residential and medical-social centers; i) Staff providing medical and social care at home; j) Staff working in public health services, i.e. National Institute of Public Health, Public Health Directorates; k) Staff working in the health units of the ministries with their own health network; l) Staff working in dialysis and transfusion centers; m) Personnel involved in vaccination campaigns.</p> <p>Stage II:</p> <p>a) Population at risk</p> <p>i. Adults over 65 years of age; ii. Persons with chronic diseases, regardless of age, according to the indications of the vaccines used. b) Staff working in key, essential areas: i. Key staff for functioning state institutions, i.e. parliament, presidency, government, ministries and institutions subordinated to them; ii. Defense, public order, national security and judicial authority staff; iii. Staff in the vital economic sector: - Processing, distribution and merchandising basic foodstuffs, namely: bakery, dairy, meat, fruit and vegetables; - Water purification, transport and distribution plants; - Electricity production, transmission and distribution; - Gas production, transmission and distribution units; - Liquid and solid fuel production, transmission and distribution units; - Medicinal products and sanitary materials for producing, transporting and distributing; - Transport of persons and goods; - Railway junctions, civil and military airports, essential ports; - Communications, namely special telecommunication service, national radio and television. iv. Staff working in educational facilities and nurseries; v. Postal and courier staff; vi. Religious cults staff; vii. Media staff engaged in activities with high risk of exposure to SARS COV2 infection such as: reports in medical facilities; viii. Sanitation and waste water staff.</p> <p>Stage III: General population</p> <p>a) Adult population;</p> <p>b) Pediatric population, depending on the epidemiological developments and the characteristics of the vaccines approved for use in case of persons under 18 years of age.</p> <p>Thus, the medical staff working in the prison system benefited from vaccination against SARS-CoV-2, with priority, in stage I. The rest of the prison staff were vaccinated in stage II, falling into the category of defense, public order, national security and judicial authority staff.</p> <p>With regard to inmates, they are vaccinated in stage III, exception for the persons over 65 years of age or with chronic diseases (vulnerable). Persons over 65 years of age or with chronic diseases (vulnerable) are included for vaccination in stage II.</p>
Luxembourg	<p>2) The criteria according to which inmates are considered vulnerable and may be classified in vaccination stage II are the age over 65 years and history with the chronic diseases listed below:</p> <ul style="list-style-type: none"> • diabetes; • obesity; • metabolic, including congenital diseases; • cardio-vascular disease; • kidney disease; • oncological disease; • lung disease; • neurological conditions, including Down syndrome; • moderate/severe liver disease; • autoimmune diseases; • HIV/AIDS.
Luxembourg	<p>3) In view of the above, the prison population has been assimilated to the general population and it will benefit from the SARS-CoV-2 vaccine in the last vaccination implemented at national level, with the exception of vulnerable inmates.</p>
Northern Ireland	<p>Vaccination policy in Northern Ireland is based on the recommendations and advice provided by the independent Joint Committee on Vaccination and Immunisation (JCVI)¹</p> <p>The most recent JCVI advice on prioritisation of the vaccine was published on 30 December 2020 and the ranking of priorities is a combination of clinical risk stratification and an age-based approach, which should optimise both targeting and deliverability. A link to the relevant guidance is provided below:</p> <p>https://www.gov.uk/government/publications/priority-groups-for-coronavirus-covid-19-vaccination-advice-from-the-jcvi-30-december-2020/joint-committee-on-vaccination-and-immunisation-advice-on-priority-groups-for-covid-19-vaccination-30-december-2020#vaccine-priority-groups-advice-on-30-december-2020.</p> <p>Vaccinations in prison settings will be in line with the JCVI recommendations and the first prisoners who meet these criteria have been vaccinated.</p>
Israel	<p>The Israel Prison Service got priority for the vaccine from the government. We were second in the priority staff and inmate.</p> <p>As of Feb 2 :</p> <p>Staff vaccination</p> <p>93% received the first shot.</p> <p>44% received the second shot.</p> <p>Inmates vaccination:</p> <p>74% received the first shot.</p>
Slovakia	<p>Vaccination policy in Slovakia is given by the Regulation of the Ministry of Health that stipulates the order of precedens. Prison population as such is not mentioned there, i.e. rules valid for the general population apply what is guaranteed also by the Act on Pre-trial Detention and Act on Prison Sentence Execution: inmates have the right to the health care in the extent available for the general population.</p> <p>Medical staff is in the first phase of the vaccination that is over at the moment, thus all prison medical staff who wanted to be vaccinated, has already received the jab.</p>

Bulgaria	In regards of your request concerning the vaccine strategy and the vaccination of prisoners and staff members, below you will find short description of Bulgarian strategy, implemented by the government. According to the strategy there are 5 stages of vaccination, as follow: 1st stage covers a group of persons (first line medical staff in hospitals, dentists, pharmacists etc.) with high risk of infection and also the risk that they can transmit the infection to vulnerable groups. 2nd stage covers staff of social institutions, pedagogical specialists and staff of mink farms. 3rd stage covers staff from different areas responsible for essential public activities. At this stage are included the staff members from the prisons, probation services and detention centers. As of 26 of January 2021 there are app. 700 staff members from prisons, probation services and detention centers who have expressed a desire to get vaccination. 4th stage are included elderly people and over 65 years of age and persons with concomitant diseases. 5th stage are included vulnerable groups and the criteria is high risk of infection because of their way of life. According to the strategy prisoners are included at this stage with no other criteria.
Estonia	1)In Estonian Prison Service priority is given to medical personnel and prison staff providing escort between housing and medical units. Next priority groups are: 1) risk group prisoners; 2) rest of prison officers and staff who have direct contact with prisoners; 3) prison support structure staff As a whole, Estonian Prison Service follows the Estonian National Vaccine Plan which gives priority to: Health care workers and people working in health care institutions; Employees and residents of care institutions; All people over the age of 70 and people with certain diagnoses. 2) According to the same criteria stated in the Estonian National Vaccine Plan. 3)In Estonia vaccination is implemented following the National Vaccination Plan. There is no special regulation or priority given to the prison population.
Ireland	1) Prisons, staff and prisoners are considered as a vulnerable setting and vaccination will be administered in line with the priority groups as set out by Government; 2) Age>65, chronic diseases and immunosuppressed 3)Prisoners are considered equivalent to vulnerable groups within the general population, ie the same clinical criteria apply as to vulnerable groups with chronic conditions
Updated information about the visits in prison in defferent countries. Are visitations suspended?	
Austria	Visits of inmates within the meaning of Section 93 StVG (concerning general visits by family, friends, etc.) are permitted again since February 8, 2021. However, these visits will continue to be only permitted without exception by way of "glass panel visits". A maximum of two persons is permitted to visit an inmate at the same time. In any case, care must be taken and appropriate preparatory organization to ensure that there are no large crowds during the visit, and that the minimum distance of two meters between persons who do not live in the same household is to be kept. The visitors are also to be made aware of the other protective and hygienic measures (FFP-2 masks, disinfection, etc.). In the event of a dynamic infection situation within a correctional institution among the staff and/or inmates, the prison management may, in consultation with the General Directorate, suspend visits of inmates within the meaning of Section 93 StVG for a short period of time. In this case, the information system shall be adapted accordingly.
Estonia	In Estonia long-term family visits are cancelled since Oct 2020. Short-term visits in secured individual rooms where visitors and detainees are separated by glass continue as normal, while following all hygiene and disinfection requirements. Also, everyone entering a prison is checked with a no-touch thermometer and in case of cold-like symptoms is denied entry.
France	The visits are still going on in France
Finland	Visits are prohibited based on the epidemiological situation on of the area the prison is located in. Finland is using 3-level model (basic phase, accelerating phase and spreading phase). Prisons located in areas that are in the spreading phase are currently restricting the visits. Additionally prisons can limit the visits based on the national situation as whole, i.e.. the current risks of B.1.1.7 spread. However The Agency just updated the covid-19 guidelines and the new guidelines underline that even if the visits are banned there should be an extra effort to allow visits by underage children. These visits are made possible with additional measures like voluntary PCR-tests or 14 days quarantine after the visit.
Lithuania	In Lithuania the visits in prisons are still suspended
Bulgaria	the prison visits in Bulgarian prisons, please be informed that at the moment the prisons and detention centers are open for visits. All visitors must respect the anti-epidemical rules and requirements – wearing a face mask which covers their nose and mouth. For each visitor of the prison or detention center obligatory thermometry is conducted and hands sanitizer is provided. Before and after each visit the premises should be disinfected. Observing a physical distance and control the numbers of entrants in order to prevent crowding is a must.
